KEY PROJECT DETAILS (FOR HARBINGER SYSTEMS)

Learning Management System Software Developer

Part of the development team to build a software application for the administration, documentation, tracking, reporting and delivery of online education courses or training programs. It supports localization. Users can have different roles and thus different access levels.

Student can opt for new courses offered by organization with admin accounts. Instructors can manage content of course with instructor accounts.

- **Role:** Production support which includes delivering new features and working on bugs/issues in current system
- **Technology:** ColdFusion, JavaScript, Ajax

Travel web site (Tripsketch.com) Software Developer

This is a cross browser compatible website which helps user find information about various places around globe. User can find information for attractions, hotels, restaurants, tours etc. in the city of user's choice. User can plan a trip with the information available. Back bone or source of data for Tripsketch is TCMS which publish data to Tripsketch. It also has online and offline widgets for Nokia. User can get the required information for the place they are looking for from their mobile when they are on the go.

- **Role** Requirement analysis for Nokia widget, UI and flow design for website and mobile apps for iPhone, Android, Nokia.
- Development of different features for website and mobile widget like:

JSON Creation utility: As the back end data is stored in travel content management system for displaying content to the user it is required to be in JSON format. I have created a utility which takes data from TCMS and outputs JSON files which is used to display data in a tabular format for various categories (like Attraction, Hotel, Restaurant etc.) This JSON content is retrieved and cached in the browser for enhanced performance.

Trip Planner: Users can create their trip plan by adding attractions, hotels and restaurants and also monitor their trip duration in weeks, days, hours and minutes in an attractive digital clock that creates a trip itinerary which can be emailed out for suggestions and changes.

Third Party Integration: Importing data for restaurants and tours from third party web site. Partner web site integration for landing page so that the travel portal can be collaboratively embedded in any website related to travel domain (like flight booking, lodging, trip organizers)

SEO and AdSense integration: The entire trip itinerary mailed has been integrated with intelligent AdSense display relevant Google advertisements to a particular itinerary.

NearMe: This is developed to help finding nearest destination from current position for mobile users where they can choose restaurant, hotel or attraction from nearby list and can get a route on Google map in single click.

Technology: HTML, MySQL, JavaScript, JQuery, JSON, Java, JSP

Sponsored product developer for a window based app which includes working on Win 32 SDK and C/C++.

CENSE"- Centralized Engine for eNged Source Estimator

Product Developer (Intern)

This Project consists of 3 Software sensors

- Drive / Folder Sensor
- Process Sensor
- Registry Sensor

These sensors help monitor system by creating log files of the changes in drive/folder, changes of processes running on system and modifications in system registry.

These log files can be used for auditing of the system, can be used to create rule-based antivirus and also can be used to convert software into portable software.

- **Role** Requirement analysis, Design, Development and Bug Fixing
- **Technology:** Win 32 SDK, C/C++
